Acme Cloud - Sharing and Permissions FAQ

How do I share a file or folder with a link?

Right-click a file or folder in the web app or the desktop app and choose Share > Copy link. Anyone who has the link can view the content. They do not need an Acme Cloud account.

Links to folders show the current contents of the folder, including files added after the link was created.

Can I make a share link expire or add a password?

Yes, on Personal and Business plans. In the link settings, set an expiry date after which the link stops working, and optionally a password that people must enter before they can open the content.

Expired links show the message This link has expired. You can extend the expiry date at any time and the same link starts working again.

How do I stop sharing?

Open the share dialog and choose Delete link. Anyone who tries to use the link afterwards sees an error. People who already downloaded a copy keep that copy.

What are the access levels?

When you invite people by email you choose an access level. Viewers can open and download files. Commenters can also add comments. Editors can change, upload and delete files in the shared folder. Only the owner can delete the folder itself or change who has access.

What is a team folder?

Team folders are available on the Business plan. They belong to the workspace instead of to one person, so files stay available when someone leaves the company. Workspace administrators decide which groups can access each team folder.

Files in team folders count towards the workspace storage, not the personal quota of the people who uploaded them.

Why can't I share outside my company?

Business administrators can restrict sharing so that links only work for people in the workspace, or block external sharing completely. If the share button is disabled, ask your administrator to review the sharing policy.
