Acme Cloud - Getting Started Guide

1. Creating your account

Welcome to Acme Cloud, the simple way to store, sync and share your files. To create an account, go to acmecloud.example and choose Sign up. Enter your name, your email address and a password of at least 10 characters.

We send a verification email to the address you entered. Click the link in that email within 24 hours to activate your account. Until the address is verified you can upload files, but you cannot share them with other people.

New accounts start on the Free plan with 5 GB of storage. You can upgrade to Personal or Business at any time from Settings > Plan without losing any files.

2. Setting up your profile

Open Settings > Profile to add a profile photo and choose your language and time zone. The time zone is used for file timestamps and activity emails.

We strongly recommend turning on two-factor authentication in Settings > Security before you store anything important. It takes two minutes with any authenticator app.

3. Installing the desktop app

The Acme Cloud desktop app is available for Windows 10 and later and for macOS 12 and later. Download it from acmecloud.example/download and run the installer. You do not need administrator rights for a per-user installation.

After installation, sign in with your Acme Cloud account. The app creates an Acme Cloud folder in your home directory. You can choose a different location during setup, for example a second drive with more free space.

The desktop app starts automatically when you log in to your computer and runs in the system tray on Windows or the menu bar on macOS.

4. Installing the mobile apps

The Acme Cloud mobile app is available for iPhone and iPad from the App Store and for Android phones from Google Play. Sign in with the same account you use on your computer.

The mobile app does not download all of your files. It shows everything in your cloud storage and downloads a file only when you open it. Mark files as available offline to keep a copy on the device.

Camera upload can automatically back up the photos and videos you take. Turn it on in the app settings and choose whether uploads may use mobile data or only Wi-Fi.

5. Your first sync

To add files to Acme Cloud, drag them into the Acme Cloud folder on your computer. The desktop app uploads them in the background and the tray icon shows blue arrows while syncing is in progress.

When the icon shows a green tick, your files are safely stored in the cloud and are available on the web and on every device where you are signed in. Changes you make on one device appear on the others within a few seconds.

The first sync of a large folder can take a while, depending on your upload speed. You can keep working while it runs; pausing and resuming is safe.

6. Where to get help

If something does not work as expected, open the help center at acmecloud.example/help or create a support ticket from the web app. Include the version of the app you use and a description of what you tried.
